

Summary

2 minutes

This module requires a sandbox to complete. You have used 4 of 10 sandboxes for today. More sandboxes will be available tomorrow.

Activate sandbox

In this module, you've added Identity to an existing ASP.NET Core Razor Pages project. The default Identity UI components were customized to satisfy the business and technical requirements. An authorization policy was created to secure certain features of the app. Finally, the authorization policy was employed to restrict access such that only administrators could manage product data.

Download project files

Use the following command to package and download your project files:

Bash

 Copy

```
pushd ~/aspnet-learn/src && \  
  zip -r ~/aspnet-learn.zip . && \  
  popd && \  
  download ~/aspnet-learn.zip
```

Clean up

The sandbox automatically cleans up your resources when you're finished with this module.

When you're working in your own subscription, it's a good idea at the end of a project to identify whether you still need the resources you created. Resources left running can cost you money. You can delete resources individually or delete the resource group to delete the entire set of resources.

Azure Cloud Shell

This module requires a sandbox to complete. A [sandbox](#) gives you access to Azure resources. Your Azure subscription will not be charged. The sandbox may only be used to complete training on Microsoft Learn. Use for any other reason is prohibited, and may result in permanent loss of access to the sandbox.
