1. Suppose you want to run a network appliance on a virtual machine. Which workload option should you choose?

☐ General purpose

☒ Compute optimized 

Compute optimized virtual machines are designed to have a high CPU-to-memory ratio. Suitable for medium traffic web servers, network appliances, batch processes, and application servers.

☐ Memory optimized

☐ Storage optimized

2. True or false: Resource Manager templates are JSON files?

☒ True 

Resource Manager templates are JSON files that define the resources you need to deploy for your solution. The template can then be used to easily re-create multiple versions of your infrastructure, such as staging and production.

☐ False
