☐ canonical / multipass

Again a Multipass release!

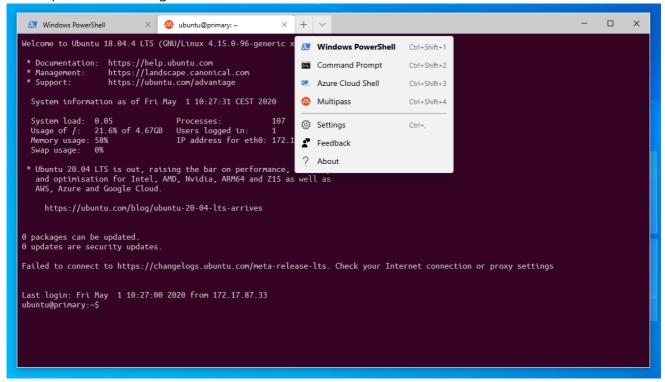

Windows and macOS installers are available below, and the Snap in the stable snap channel:

```
snap refresh multipass --channel stable
# or
snap install multipass
```

Highlights

- We're a strictly confined snap now (no --classic required on installation and less cross-distro trouble) (#1074):
 - o refer to snap connections multipass for the permissions we get
 - Multipass now runs on Ubuntu Core hosts, but you'll need to use sudo multipass ...
 for the moment

• We implemented integration with Windows Terminal:

- We added a preview of LXD as a supported backend (#1533):
 - you will need to install 1xd and configure everything
 - \$ snap install lxd
 - \$ lxd init --auto
 - \$ snap connect multipass:lxd lxd
 - \$ multipass set local.driver=lxd
- And added some cool appliance images (#1543):

<pre>\$ multipass find appliance:</pre>			
Image	Aliases	Version	Description
appliance:adguard-home		20200605	Ubuntu AdGuard Home
Appliance			
appliance:mosquitto		20200605	Ubuntu Mosquitto
Appliance			
appliance:nextcloud		20200605	Ubuntu Nextcloud
Appliance			
appliance:openhab		20200605	Ubuntu openHAB Home
Appliance			
appliance:plexmediaserver		20200605	Ubuntu Plex Media
Server Appliance			

You can try those out with multipass launch appliance:<appliance name> (you'll need to use VirtualBox on macOS).

Bugfixes

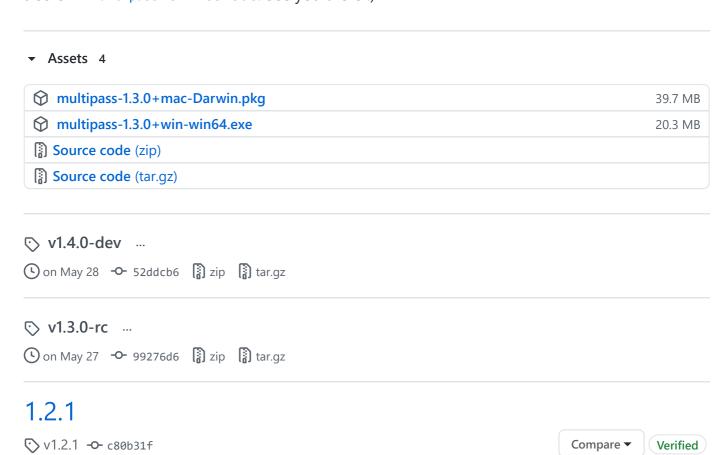

use the wheel group for better Fedora support (#1181)

- add snapcraft:core20 builder support (#1417)
- flip the default of data removal on uninstall to "No" (#1507)
- fix terminal width calculation on Windows (#1547)
- and terminal size detection in Windows Terminal (#1370)
- add hypervisor selection in Windows installer (thanks @joedborg!)

You can find the full list of changes since v1.2.0 in our v1.3.0 milestone and even more detailed in the full commit log.

Feedback

Please file issues here for problems and feature requests, or come to our discourse to chat. We're also on #multipass on Freenode. See you there:)

Multipass version 1.2.1

A Windows- and macOS-only release - **Ubuntu 20.04 LTS** is released and now enabled in Multipass, too!

Savig released this on Apr 24 · 182 commits to master since this release

Installers are available below.

Multipass version 1.2.0

Another stable Multipass release!

Windows and macOS installers are available below, and the Snap in the stable snap channel:

```
snap refresh multipass --channel stable
snap install multipass --classic
```

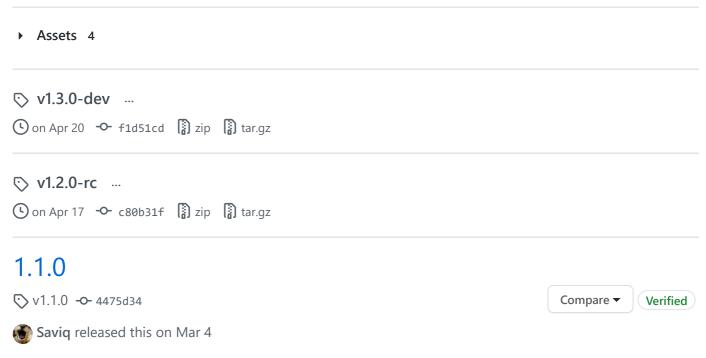

Highlights

- better mount performance and stability (#627)
- fix socket ownership on Fedora (#1181)
- increase the image resize timeout (#1187)
- expand ~ in mount target (#1230)
- avoid a crash in find command on macOS (#1411)
- don't break on DNSMasq configration existing on the host (#1468)
- use HTTPS when downloading images (#1420 thanks @jasonmccallister!)
- improved error reporting (#1429)
- check for --cloud-init file existence (#1491 thanks @ianbtr!)
- instances with multiple CPU's now work on macOS (#1481)
- increase daemon logging verbosity on macOS and Windows

You can find the full list of changes since v1.1 in our v1.2.0 milestone and even more detailed in the full commit log.
